Metals Technology Corporation Expands Its Induction Heat Treating Capability

Metals Technology Corporation in Carol Stream, IL, continues to grow ...has added two induction Heating units Metals Technology has greatly enhanced its Induction Heat Treating capability with the installation of two INDUCTOHEAT units. One with 50kW/200 KHz power supply and another with 15kW/200 kHz power supply. The 50kW unit is equipped with the “Unimat” quench system in which the parts are held on a 5 spindle lift/rotate table system with the quench cycle automated. Oil, Polymer, Brine quench media is available as required. The smaller 15kW unit has a single spindle lift/rotate system with similar quench media choice.

The Induction Units can be used for selective hardening, tempering and for some brazing needs. With these units Metals Technology can now process a bigger variety of parts and offer a fast turn around.

About Metals Technology Corporation

Metals Technology Corporation, a member of MTI, has been in business since 1963, offering diversified commercial heat treating services, including gas carburizing, carbonitriding and low temperature ferritic nitrocarburizing, neutral hardening, austempering, vacuum and induction heat treating, gas nitriding and much more. The company takes pride in the quality and professional service it provides. This family owned and operated business located in Carol Stream, IL, has a modern 70,000 square-foot facility with room to expand. The ISO 9001:2000 registered company has a team of metallurgists with combined professional experience of over 50 years who are available to provide metallurgical expertise.
